

## Store your book data in one place for easy access and efficient distribution of information

### Managed through a web browser

Manage your titles from anywhere in the world with our simple to use web interface. Quick access your title information through any internet connected browser.

### Keep control of your content

Title Manager allows you to upload cover images and other digital assets via a simple upload interface. A thumbnail image will automatically be sent with your Onix file to suppliers so there is no need to distribute images separately.

### Find information quickly

Search by Subject, ISBN, Contributor, Title, Publication Date, etc. Title Manager also lets you find your own assets.

### Generate 'Advance Information Sheets'

Reduce errors and wasted time creating AI sheets. Title Manager can format and output your AI sheets automatically. ISBN, Price, Descriptions, Images, etc. can be placed on a styled page in PDF, Word or InDesign.

### Automate your catalogue creation

Flow your entire catalogue into InDesign in seconds. Meta data can be placed anywhere on the page. Images, text, ISBNs, Prices, CBMC, etc. are set in the desired format and InDesign's auto flow capability is leveraged to generate a styled catalogue.

### Need a complex catalogue layout?

Our catalogue generation scripts create objects on the page for each book. Using a library you drag and drop onto an empty page with both scripting and layout applied. Title Manager formats the XML for correct output so no need to worry about any XSLT problems.

### Shared access

Each title can be owned by an organisation and only people who belong to that organisation can see or edit those titles. The same applies to subjects, contributors, etc.

### Control user privileges

Users can be restricted only to the areas they are meant to use. With a role based menu, tabs and read only access you can grant access to more of your organisation but restrict their access to the areas they don't need.

### Easy distribution of data

Simplify your meta data distribution with our automated destination updates. Bibliographic data changes will be sent automatically to: Amazon, B&N, Bowker, Nielsen, Waterstones, etc.

### Fixed costs

Simple fixed price install costs or use our hosted pay monthly service. Check the latest pricing at [www.stison.com](http://www.stison.com)

Titles are listed in a clear readable format for quick search and referencing.

Each title has associated meta data stored under clearly visible tabs.

Drag and drop elements, with drop down lists make filling in data quick and easy.

- **Subjects** – Support for BIC, BISAC, Subject, Theme, Subject Grouping and Keyword
- **Prices** – Stores multiple price types across different currencies
- **Rights** – Rights restrictions with customisable regions
- **Media** – Store thumbnails and other content against the title and or content record
- **Content Based** – Share meta data (Descriptions, Contributors, etc.) across content of different forms
- **Onix Compliant** – Creates and sends ONIX to other parties
